

# Stop AMR

## AMR – a Global Threat

**AMR** : Antimicrobial Resistance

**Antibacterial-drugs have had a powerful impact on the treatment of bacterial infection.**

**However, in recent years, drug-resistant bacteria which are ineffective to antibacterial-drugs are spreading.**

**It is becoming a global threat.**

**If these drug-resistant bacteria increase, infections become more severe, and may even be fatal.**

**Through measures such as promoting the proper use of antibacterial-drugs, we are working to prevent the increase of, and to reduce, these drug-resistant bacteria.**
